New Everblooming Rose Rome Glory

Plant Patent applied for

**None Genuine
Without This Tag**

Foreword

Once again our Rose Annual makes its Spring appearance. We feel there is a special significance to the Annual this year for 1938 marks the twenty-fifth anniversary of the founding of our Society. We trust it will prove interesting and helpful to all.

We would welcome suggestions for subjects to be featured in the 1939 Annual, as well as suitable and interesting material for publication in the Year Book or Bulletins. Even a modest rose bed may yield a discovery which will be most helpful to another rosarian, so be generous with your experiences.

It is our pleasure to acknowledge gratefully the assistance of those who have made this publication possible—our members who have contributed their knowledge so freely, Messrs. E. D. Smith and Sons of Winona, who have made the colored illustrations possible and our advertisers who have supported us in so loyal a fashion.

THE EDITOR.

THE ANNUAL MEETING

The Annual Meeting of the Rose Society of Ontario was held in the Botany Building of the University of Toronto, on Wednesday, December 8th, 1937, at 8.14 p.m.

Mr. A. J. Webster, President, was in the Chair.

Minutes of Annual Meeting, December 3rd, 1936

The Minutes of the Annual Meeting held on December 3rd, 1936, on Motion of Mr. A. A. Gow, seconded by Prof. A. H. Tomlinson, were taken as read.

Report of President for Year 1937

Mr. A. J. Webster, President of the Society, presented his Annual Report for the year 1937, as follows:—

"Once again it is my privilege and pleasure to welcome you to the Society's Annual Meeting, and in doing so I wish, also, to express once more to Professor R. B. Thomson on your behalf, my appreciation of his courtesy in making possible the use of this auditorium. We are indeed grateful to Professor Thomson and to the other officials of the University of Toronto who have facilitated our occupation of the Botany Building this evening.

The spring and early summer of 1937 will long be remembered as one of the most favourable seasons which Rosarians have experienced in many years. The ample moisture and absence of intense heat combined to produce strong growth and a wealth of bloom of high quality, surpassing in all respects the bloom of most recent years. The second crop of bloom followed closely on the heels of the first crop, and on every hand I heard exclamations of delight and satisfaction with the performance of Roses. In the autumn, as was to be expected under the previous and prevailing weather conditions, fungous diseases made their appearance, but in gardens where persistent and timely attention had been given to the application of fungicides, the resultant damage was slight. The past season, I am sure, must have made many new friends for the Rose.

At the Annual Meeting last year I stressed the urgency of co-operation from all members in our efforts to restore the membership to its previous level of about 1,200, and it is with regret that I record very little progress in this direction. I trust that something more substantial may be accomplished in 1938. Your Directors for the coming year, I fear, will have to give consideration to the curtailment of services and to the adoption of measures of rigid economy in operation, or, as an alternative, to the expedient of increased membership fees. I trust the latter may not be necessary.

The Year Book appeared in its usual form but unfortunately the revenue from advertising did not quite meet the cost of publication. Some revision of the arrangement regarding advertising is in contemplation, which, it is confidently expected, will result in increased revenue to the Society.

Only two Bulletins were issued in the course of the year owing to the necessity of reducing expenses.

A departure from past practice was made with respect to the Annual Rose Show which was held in the Royal Connaught Hotel, Hamilton, on 23rd June. It was considered desirable from the standpoint of extending the Society's influence to new territory to transfer the Rose Show, and also as a measure of economy. I desire in this connection to express the thanks of the Society to Mr. MacLennan, Resident Manager of the Royal Connaught Hotel, for the many courtesies extended by himself and his staff. Details of the Rose Show will be furnished in the report of the Exhibition Committee.

A lecture was held in the Royal York Hotel in April last and was well attended.

In conclusion I desire to thank those of my fellow-Directors who have been active and self-sacrificing during the past year in attending to the Society's affairs. In retiring from the post of President I wish, also, to thank our Secretary, Mr. Philp, for his continued loyalty and devotion to duty, sometimes in the face of difficult circumstances."

Financial Report for 1937

Colonel A. E. Nash, Chairman of the Finance Committee, presented the Financial Report for the year ending November 30th, 1937. The report on Motion of Mr. P. L. Whytock, seconded by Mr. D. C. Patton, was adopted. The report is as follows:—

"It has been customary for me, as chairman of your Finance Committee, to make a few remarks at the annual meeting regarding the financial position of your society and to present a summary of its financial operations. For this purpose I have prepared—

- (a) A statement of the funds which the society now has available towards meeting its outstanding debts,
and
- (b) Comparable statement of the receipts and payments for the five years ended 30th November, 1937.

These statements show a rather unsatisfactory position. At 30th November, 1937, the society had cash funds and accounts receivable amounting to \$132.15, from which to pay accumulated accounts payable of \$351.88, leaving a deficit of \$219.73 without taking into account a balance in the reserve fund of \$63.38 which was set aside some years ago from life memberships. This deficit is approximately the same as a year ago so that, from the standpoint of meetings its current expenses, the society has just maintained its position.

Receipts, however, are this year the smallest on record with the exception of the year 1934 when no exhibition was held. They amounted to \$1,345.50, whereas in 1932 our revenues were \$2,808.54. On the other hand, expenses were again reduced this year. The arrangement for holding the show in Hamilton appears to have been satisfactory; the attendance was well maintained and although it produced less revenue, the expenses of the show were very considerably less.

The primary need of the society is, of course, for a larger membership. Each year sees a very large turnover in members and, while our paid-up fees this year are practically the same as a year ago, there were 143 mem-

bers who did not renew their memberships and were largely replaced by new members. This is a matter which should give us some concern, and I am inclined to think that some further tangible benefits to members should be sought. If we can continue to get the number of new members that we now obtain and hold even one-half of those who are dropping out by resignation, the society's membership could be built up in a few years to a very satisfactory level. I would specially commend this suggestion for the consideration of the membership committee."

Appointment of Auditors for 1938

On Motion of Mr. B. McKechinie, seconded by Mr. J. E. Walsh, Mr. L. A. Winter and Mr. G. C. T. Pemberton, were appointed Auditors for 1938.

Report of Membership Committee

Mr. D. C. Patton, Chairman of the Membership Committee, presented The Membership Committee's Report as follows:—

"It is not with the greatest of satisfaction or pleasure that I present my report as Chairman of the 1937 Membership Committee. Pressure of business prevented my devoting the time to the work I should have liked, but nevertheless, your committee did give a good deal of effort and thought to the Society's membership problem.

In response to our President's appeal a year ago, a number of members sent in names of prospective new members. A special appeal was made to some fifty of these early in March and quite a few responded.

Realizing, however, that not only must new members be secured, but old memberships be kept up, the list of those who had not paid renewal fees in 1936 was checked and a personal letter addressed to over two hundred such, in early April, urging their continuance. The response to this was fairly encouraging.

The appeal for new members in the Toronto District was handicapped this year by the fact that the Rose Show was scheduled for Hamilton. It was hoped, however, that this factor would be more than offset by the large number of new members from Hamilton and District who would join us. Well, before the Show, with a number of your Directors, we met a large Committee of the Hamilton Horticultural Society in Hamilton, put on our best sales talk, left ample supplies of application blanks, etc., and were assured of many recruits. We also circularized the Hamilton members of a well-known National Women's Association, inviting membership and attendance at the Show. Also, three new classes were created in this year's Show List, open only to members joining in 1937.

The results from all of this? Rather discouraging! 103 new ordinary members joined us this year and two new life memberships came in. Our Secretary tells me, however, that not more than twenty of these came from Hamilton and District, and, here is the rub, over 120 members paid up to 1936, did not renew in 1937.

The roll at present, therefore, is:

Paid-up ordinary members.....	568
Paid-up Sustaining members.....	12
Paid-up Life members.....	66
Honorary Life members.....	5
Total.....	<u>651</u>

This represents a net loss in membership of about 20 for the year.

It is apparent, therefore, that while, thank goodness, we have a very substantial number of faithful members who maintain their interest year after year, there is a large dropping off each year of former members. It is difficult to believe this is only because of the \$1.00 fee involved. We fear it is lack of, or waning interest. Therefore, it would seem that those of us responsible for maintaining and increasing our membership each year should try and do more than merely talk our friends or neighbours into giving a dollar. We should literally spread the gospel of the Rose and get our new member or members actually growing roses and attending the Rose Show. That has been my experience at least, and of the new members I've personally secured, the last few years, I know fifteen at least are growing roses, several quite enthusiastically. They in turn are interesting other friends, all potential members.

I regret this report could not be more encouraging, but wish to record my thanks and appreciation to the other members of the Committee and our Secretary, Mr. Philp, for their help and co-operation throughout.

Report of Exhibition Committee

Mr. J. Lockie Wilson, Chairman of the Exhibition Committee, gave resumé of the Annual Rose Show, which was held at Hamilton on Wednesday, June 23rd, 1937.

Report of Nominating Committee

On Motion of Mr. P. L. Whytock, seconded by Mr. B. McKechnie, and Carried, the Report of the Nominating Committee for the election of Directors for 1938 was accepted. The following were elected Directors for 1938:—Mr. J. G. Beare, Mr. C. W. Cruickshank, Col. G. R. Geary, Mrs. A. A. Gow, Mr. A. E. Brown, Mr. S. B. Brush, Mr. E. F. Collins, Mrs. J. Earl Lawson, Col. A. E. Nash, Mr. D. C. Patton, Mr. A. A. Norton, Dr. A. H. Rolph, Col. Hugh A. Rose, Mr. Leon Smith, Prof. A. Tomlinson, Mrs. A. J. Trebilcock, Mr. John R. Walsh, Miss H. A. Webster, Mr. P. L. Whytock, Mr. J. Lockie Wilson.

Guest Speaker

Mr. A. J. Webster introduced the guest speaker, Mr. J. C. Taylor, Ontario Agricultural College, Guelph. Mr. Taylor's interesting address, which was illustrated by lantern slides, was on the Royal Botanic Gardens, Kew.

On behalf of the members present, Mr. Webster suitably thanked Mr. Taylor for his address.

For the use of the Botany Building for the evening, the President thanked Prof. R. B. Thomson.

J. M. PHILP,
Secretary.

G. C. T. PEMBERTON,
Auditors.

GREETINGS FROM THE PRESIDENT

Again I am honoured to be elected President of the Rose Society of Ontario. I appreciate the confidence of your Directors in my appointment to the office and, with their help, will strive to fill it to the best of my ability. The Society has completed twenty-five years of service in the promotion of rose growing in Ontario and enters its second quarter century with high hopes of increasing usefulness in the spread of rose culture.

Now the Society is for the benefit of the members, the larger the membership, the more service we can give to all. Do help build up the Society. The depression, the sub-zero winter is behind us—the season of 1937 proved Ontario is second to none as a place of roses. Garden lovers everywhere are replanting their rose beds. Don't miss an opportunity to secure a new member or persuade a former member to rejoin the Society.

The Rose show will be held in Toronto on June 21st. Plan right now to attend the show with your friends and to make all the entries your garden will afford.

The lantern slide competition is something new. With the dual interest in gardening and photography at its height, we look forward to a collection of slides that will be a great source of interest and pleasure when shown to the members. It is expected that these will be available on loan to groups of members outside Toronto.

Let us all work together to promote the interest of the Rose, planting, cultivating and exhibiting in its varied forms this peerless flower.

P. L. WHYTOK, President.

TEST GARDEN AWARD

While the early summer performance of the roses in the Test Garden at the Ontario Agricultural College, Guelph, was outstanding, the condition in September left much to be desired. The Committee was able to make only one award, a Certificate of Merit, to D. Prior and Sons, of Colchester, England, for their Polyantha, **Madge Prior**. The flower is single, a brilliant claret color, with white eye, borne freely in large clusters on strong stems. The foliage is dark green. The unusual color, coupled with good qualities of growth, makes the rose a desirable addition to the group of large flowered polyanthas which is becoming more popular each season.

THE ANNUAL ROSE SHOW

By A. J. Webster

For the first time in the Society's history, the Rose Show was held at a point outside of Toronto, on June 23rd, 1937, the venue in this case being the Royal Connaught Hotel, Hamilton. Several factors were responsible for the decision of the Directors to accept the joint invitation of the Hamilton Chamber of Commerce and the Hamilton Horticultural Society to hold the Rose Show in that city. One reason was the desire to stimulate interest in roses in a district particularly adapted to their culture and, incidentally, to extend the influence and usefulness of the Society in an area where our membership is not commensurate with the position which rose growing occupies in the community. A second reason was the very favourable arrangement offered for a location for the Rose Show, and at this point it seems proper to record the Society's appreciation of the generosity and courtesy of Mr. MacLennan, resident manager of the Royal Connaught Hotel, who, along with his staff, made a notable contribution toward the pleasure and success of the occasion. The Hamilton sub-committee composed of Mr. Gunnell and other Directors of the Hamilton Horticultural Society, looked after details before and during the Show, and their work also merits praise.

Mr. J. Lockie Wilson, Chairman of the Exhibition Committee, and the various members of his committee were indefatigable, and in this connection it is appropriate that a special tribute be paid to the competent manner in which Mrs. J. Lockie Wilson discharged her duties. She has lost none of her long recognized capacity for detail and her presence recalled pleasant memories of her activities at previous Rose Shows when she occupied the Secretaryship.

The thanks of the Society are due to those friends who assisted by staging non-competitive displays of bloom. Among these were Messrs. Henry Bertram, Dundas, E. D. Smith & Sons, Limited, Winona; Sheridan Nurseries Ltd., Clarkson; The Dale Estate Ltd., Brampton; Hamilton Parks Department, Toronto Parks Department, Welland Parks Commission, St. Catharines Board of Parks Management, and the Rose Society of Ontario Test Garden at Guelph.

The entries numerically were only slightly in excess of those of 1936, which fact was somewhat disappointing as in such a rose season as was experienced in 1937, it was hoped that the entries would establish new records. The average quality of bloom was high, as was to have been expected.

Exhibitors were present from Welland, St. Catharines, Hamilton, Dundas, Guelph, Islington and Toronto, and while there was a wide distribution of prizes, the sweepstakes prize, represented by the Harry Oakes Trophy, again went to our old friend, Col. Hugh A. Rose, of Welland, whose magnificent blooms were staged with consummate skill. Col. Rose also captured the P. H. Mitchell Challenge Trophy, awarded for the best rose in the Show.

Music was supplied throughout the early evening by the hotel orchestra, and this feature added much to the enjoyment of the visitors.

The Rose Show each year serves to assist in sustaining the enthusiasm of the ardent fanciers, in reviving the flagging interest of the luke-warm growers, and in awakening the desire for roses amongst those who know them not. It serves as an opportunity for the exchange of ideas on culture and on varieties, for the making of new Rose contacts and for the renewal of old friendships. Let us make the most of the opportunities thus presented at the Society's Rose Show in 1938.

COLOURED LANTERN SLIDE COMPETITION

Class A	Class B
Rose Garden or Part of Garden	Specimen Bloom or Spray of Bloom
First Prize.....\$3.00	First Prize.....\$3.00
Second Prize..... 2.00	Second Prize..... 2.00
Third Prize..... 1.00	Third Prize..... 1.00

Rules:

Competition is open to all members of the Rose Society.

Slides must be from pictures taken in the competitor's garden or from pictures of rose blooms grown by competitor.

The slides should be the standard size— $3\frac{1}{4} \times 3\frac{1}{4}$ or $3\frac{1}{4} \times 4$. (These can be made from any photograph or from a negative of suitable size. There are reliable firms in Toronto who specialize in this work.)

All slides entered become the property of the Rose Society.

Competition will close October 10th, 1938.

Members are urged to share the beauty of their rose gardens and rose blooms by entering the competition. Additional information may be obtained from the Secretary.

SPECIAL CLASS			
(OPEN TO AMATEUR WOMEN MEMBERS)			
57. Best Vase of Roses, must be grown and exhibited by a woman.		Challenge Trophy, Mrs. P. A. Thomson	\$3.00

Diploma

\$2.00

\$2.00

CLASSES		PRIZES	
BEST ROSE IN THE SHOW To be selected from any entry.		Challenge Trophy, P. H. Mitchell	
SWEEPSTAKES PRIZE Winner of the highest aggregate score of points		Challenge Trophy, Harry Oakes	

For purposes of this Show an Amateur is defined as a person who does not grow flowers for profit, and who cultivates Roses without the assistance of skilled gardeners, but who may employ a laborer.

A Novice is an Amateur who has never exhibited roses before.

In all classes except Numbers 3 and 54 Rose foliage only is to be used.

For purposes of this Show Pernetianas are regarded as Hybrid Teas.

The use of wire or other artificial supports in the Decorative Classes is prohibited.

Prizes will not be awarded unless exhibits are considered worthy.

All exhibits must be staged by 12.00 p.m., in order that the judges may proceed with their work.

All roses must be grown by Exhibitor with the exception of Class 3:

Exhibitors must leave the room at or before the commencement of judging and must not re-enter until the completion of judging.

NOTE:—The Exhibition Committee provides holders and vases; also uniform labels where the classes must be named, but if you are showing roses in baskets or bowls you must provide your own, leaving them, with your Exhibit, until the Show is over in the evening. Only Rose Foliage is allowed.

NOTE:—The R.S.O. boxes, to be used in several classes, are hollow wooden boxes, which will be supplied by The Rose Society of Ontario, the lids of which are covered with moss and pierced with six or twelve holes into which fit glass tubes containing water.

THE ANNUAL ROSE SHOW

of the Society will be held on Tuesday, 21st June, 1938, in the
Varsity Arena, Bloor Street West, Toronto, Ont.

THE INAUGURATION OF THE ROSE SOCIETY

FEBRUARY 19th, 1913

When your Editor realized a few weeks ago, by the simple process of subtraction, that the Rose Society was twenty-five years old, the idea of a historical sketch for this Annual seemed simple enough. Preliminary delving into the material on hand soon convinced her that only a comprehensive history of the Society could do justice to the founders and the ardent rosarians who have followed their lead. It is a hope that during the coming months, with the help of some of the older members, a complete record of the Society from its founding will be compiled.

It may interest the members to look back on the inaugural meeting and the following account is taken from the first Annual:

‘On a snowy winter day a few rose enthusiasts gathered together by the kind permission of Dr. and Mrs. Allen Baines in the drawing room of their residence on Bloor Street, Toronto, and there gave practical shape to an idea that had long been thought of, the founding of a Society devoted to the Rose alone. The following is a quotation from the Minutes of the inaugural meeting:

“At a meeting held at the residence of Mrs. Allen Baines, 228 Bloor Street West, on the above date, at which were present Mrs. Allen Baines, Mrs. Goldwin Howland, Mrs. L. A. Hamilton, Mrs. Reginald Northcote, Mrs. H. S. Strathy, Mrs. Hartley Dewart, Mrs. Dudley Stayner, Dr. Helen MacMurchy, Mrs. A. B. Patterson, Miss Edith Lockhart Gordon, Miss Beatrice Francis, and Miss Marion Armour, it was moved by Mrs. Baines that this meeting having at heart the culture of the Rose, and the extension of knowledge concerning it throughout the fertile Province of Ontario, and feeling that the time has come when those interested in its cultivation should be invited to form a society, called the Rose Society of Ontario, to be composed of those present and

such persons as should hereafter become members, according to the Constitution. This motion was seconded by Miss Francis, and carried. The Constitution, which appears on another page, was moved by Mrs. Baines, seconded by Mrs. Hamilton, and carried."

So was formed a Rose Society whose purpose is in short, as our Prospectus has it, to encourage the love and the growth of roses throughout the Dominion.

From far and wide congratulations were received upon a venture of so beneficent a nature. Their Royal Highnesses the Duke and Duchess of Connaught signified their gracious consent to be our patrons.

A message from the Old Country seemed fragrant with the breath of roses and was wafted from the home of Miss Gertrude Jekyll whose love of gardening, conveyed through many works of exquisite charm, has had a far reaching influence across the sea. Here is the message: "It is good news that there is to be a Rose Society for Ontario. Rose lovers in the Old Country will join with me in sending their heartiest greetings and most cordial wishes to their fellow enthusiasts in the Dominion; with the further hope that other Provinces will soon follow Ontario's good example."

It was deemed advisable that only one exhibition should be held during the first year owing to the labor of establishing the Society. The efforts of the officers were therefore centred upon the summer show which was held in St. George's Hall, Toronto, on Friday, July 3rd, 1913, and considering the intense heat of the previous days and of the day itself, the display of flowers was gratifying.

The purposes of the Society are to study, cultivate and exhibit Roses, award prizes for cultivation, exhibition of, and essays upon Roses and Rose Culture. To acquire a Library on Rose Culture, and generally to further and encourage the cultivation and study of Roses.'

Thus was founded the Rose Society of Ontario. Succeeding enthusiasts have carried on, with true devotion, the Society inaugurated that snowy winter day and to quote from our President's greeting: "The Society enters its second quarter century with high hopes of increasing usefulness in the spread of Rose culture."

ROSES IN THE SMALL GARDEN

By D. C. Patton, Islington, Ont.

We, of the cities, towns and villages of old Ontario take justifiable pride in the fact that we are to a remarkably large degree, home owners. And be they ever so humble there are very few Ontario homes but boast some attempt at lawn and garden. The vast majority of our homes have really attractive grounds with trees, shrubs and colorful flower beds. We are more and more becoming garden conscious. The modern builder not only makes the new home attractive and convenient, but he knows the grounds must be artistically laid out and planted before he can expect to attract the modern home seeker.

The front lawn is perhaps terraced—a rockery built—curving flagstone walks and steps are laid—and evergreen or shrubbery foundation planting done. Even the back yard is sodded—and a tree or two planted, while a border for flowers is left round the boundary fence or wall.

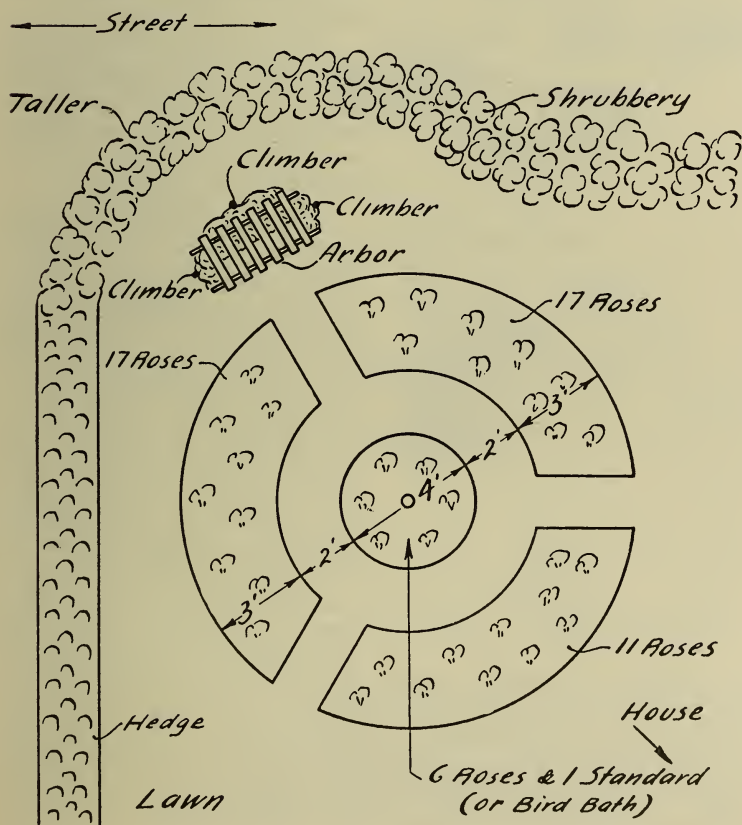

The front is perhaps quite appropriate and little need be changed or added. Depending on the degree of imagination, enthusiasm and love of gardening possessed by the owner, however,—be the home old or new—the grounds at the rear may remain just a back yard, or become a “thing of beauty, and a joy forever.”

Naturally, we Rose enthusiasts feel that no matter what, or how many other flowers or features are included, no garden is really complete without Roses. And apparently most people think so—as we find most homes have, or did have a few rose bushes—and a climbing rose or two.

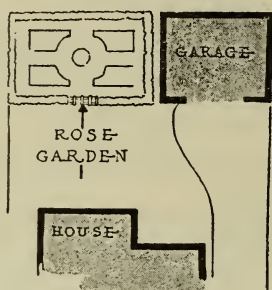

But our friend the Rose is rather a particular and just a wee bit exclusive lady, and I believe one of the most prevalent reasons for the average gardener's failure to “have much luck with roses” is his own fault, in that the few bushes he hopefully started with were planted here and there in the border—between perennials perhaps—or where zinnias or asters a little later were crowding them. They struggled away and gave a few blooms—probably were neglected that Fall—and failed to survive the Winter. Next year that gardener thought that roses didn't seem to do very well in his garden and he wouldn't bother with any more. Too bad! They

never really had a chance! To do well, certainly to do their best, roses **MUST** have a place to themselves. If you haven't tried before—you will be amazed and delighted at the wonderful and continuous yield of blooms a very small bed of roses will give you for years—provided—

1. The bed is located, and constructed with due regard to proper exposure, soil and drainage,
2. That varieties proven good in your part of the country are chosen and properly planted, and—
3. That after planting, they are given a reasonable amount of care in the way of cultivation, spraying and winter protection.

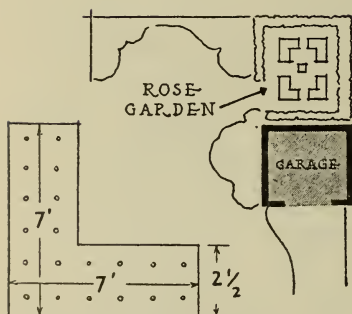

Numerous articles and books have been written on all the technical angles of successful rose culture—soil, drainage, fertilizers, planting, pruning, control of insect and other pests, etc. The bulletins and Year Books of your Society have published expert data on all these topics and the catalogues of the better rose growers contain brief but reliable instructions. Our members have the added advantage of being cordially invited to phone or write our Secretary, if in doubt on any of

these matters and he will gladly put them in touch with one of our experienced members, who in turn will count it a pleasure to advise the inquirer. Try it!

The purpose of this article is to offer a few suggestions as to location, design, and material for a small rose bed, or rose garden of from a dozen to fifty or sixty plants.

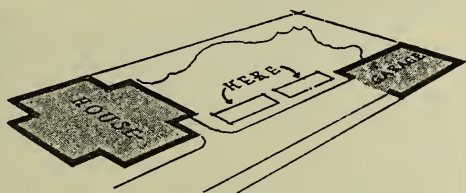

We have stressed that roses should not be planted among other flowers in the border. Neither will a section of the border reserved for roses only be entirely satisfactory, as, if the border is backed by a fence or wall—as most are—one cannot get around the plants without stepping among them in the bed. The rose bed should have a background—of hedge, shrubbery, or climber-covered fence or wall—BUT there should be a grass or flagstone walk—at least two feet wide—between

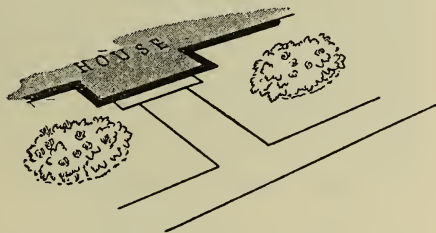

Typical bed
20 ROSES

it and its background. Not only does this permit a view of the roses from all sides, but allows easy access for cutting, spraying and cultivation. Important too is the fact that the plants are then away from the influence of the roots of shrubs or hedge—if such be their background—or from the reflected heat, or dampness, of an adjacent wall.

Now as to the best location for the rose bed? Your choice must be influenced by the direction your home faces, and in which your garden lies—and by the size and shape of the lot. In answer to the question "Where to make a Rose Bed?" the late Dr. J. H. Nicolas—America's outstanding Rosarian, says in his "ROSE MANUAL"—"If I had the choice of several locations, I would give the preference to a spot receiving sunshine from eleven or twelve o'clock till evening. My second choice would be a partly shaded place, with sunshine from morning till noon, and my third, an open space with sunshine the whole day. But I would always endeavor to have a good protection or windbreak on the north and west sides, with trees or tall shrubs, preferably evergreens. Roses love aeration or circulation of air, but resent in the most outspoken fashion, sweeping winds, cold in winter and stunting the plant in summer by draining its moisture." Little need be added to that expert advice, except perhaps to mention that in the small garden—the house itself, or the garage may be utilized to provide the required windbreak to North and West.

*Beds parallel to
walks or drive*

*DON'T plant
circular bed in
middle of lawn*

Having due regard then to the matter of protection and sunshine, how much room is needed—and what shaped bed or beds would look best in our garden? A rectangular bed 7 feet long by $2\frac{1}{2}$ feet wide will comfortably hold twelve Hybrid Teas, or Polyanthas. Here are some interesting and practical ideas from the delightful booklet "All About the New Roses," published by our good friends the Winona Nurseries Ltd. One of these plans may be your answer?

Note that the garages shown in these sketches are where the vast majority are located in our town and city lots; and how nicely the space behind or beside the garage is utilized for a rose garden. Note also the paths around the beds—and the facilities for placing an arch or arbor as an entrance point—and on which climbers could be trained.

Or, if you have a corner in either front or back lawn, particularly if bounded by hedge or shrubbery, the plan on page 29 will prove practical, not difficult to construct, and in a relatively small space will give you a compact, semi-formal rose garden with ample room for fifty to fifty-five dwarf roses and two or three climbers.

The arbour has a seat and latticed back, so a climber may be started behind—and one on each side. The grass paths are wide enough to permit the use of the lawn mower. All the plants may be easily reached from both sides while the garden may be entered from four points. The arbour, screened from the street by tall shrubs, and facing the house, offers a delightful retreat in which to read—or just relax and enjoy the roses! The centre bed may contain a sun dial or bird bath, surrounded by low growing bushy type roses. In a rose garden of this design, we have a half standard *Mad. Ed. Herriot* as the high point in the centre, with six dwarf plants of the same variety and *Comtesse Vandal* of similar coloring—below. A similar layout, surrounded by low cedar hedge, with taller pyramidals flanking the two main entrances would give a more formal, old-world effect and, of course, the plan need not occupy a corner—but could be carried out so the centre is equi-distant from the side boundaries. In that case the arbour would be parallel to the back boundary.

Having chosen the location—and decided on the best plan—what varieties shall we plant? There is of course a wide diversity of opinion among rose lovers as to what are the best—and which are their favorite roses. A concensus of the choice of experts can be given however. Two years ago, with a view to assisting the beginner in making his initial selection of twelve roses likely to yield the best results from the standpoint of productiveness, quality of bloom, vigour, disease resistance and hardiness under ordinary cultural treatment, your Society consulted the opinion of fifteen keen observers resident in many parts of Canada—and one in the United States. The following is the result of that enquiry—with the number of supporters each variety had, of the sixteen voting:—

1—Etoile de Hollande.....	15
2—Mrs. Sam McGredy.....	9
3—Betty Uprichard.....	8
4—Sir Henry Seagrave.....	6
5—Madame Butterfly.....	5
6 to 12 inclusive.....	4 each
Feu Jos. Looymans	
Mrs. Henry Morse	
Emma Wright	
McGredy's Yellow	
Mrs. A. R. Barraclough	
Rev. F. Page Roberts	
Julien Potin	

It will be noted that only one red, and no white rose is included, while there are five yellow shades and four pink. One orange and one copper colored variety complete the twelve. Many may desire a more equal distribution of color—but here are twelve exquisitely beautiful roses—and while you will want others, these twelve merit a place in any rose collection.

To bring the list up to fifty splendid roses—and give a more even balance of colors—the following have been proven consistently good in Ontario gardens and in the opinion of Mr. A. J. Webster and other connoisseurs include several which might well be among the Best Twelve. Any or all of them may be planted with confidence in Ontario and the majority will produce blooms of exhibition quality and with real perfume. Except where indicated otherwise—all are Hybrid Teas or Pernetianas. Several are fairly recent introductions but the majority will be found listed in the catalogues of the better growers.

Large Flowered Polyanthas

The Poulsen Trio
 -Else Poulsen (Pink)
 -Kirsten Poulsen (Red)
 -Karen Poulsen (Scarlet)

Climbers—Again a wide diversity of opinion exists as to which are best and most beautiful, but if only three or four may be planted—our choice would be: Paul's Scarlet Climber, Mad. Gregoire Staechelin (carmine and pink), The New Dawn—a really recurrent blooming Dr. Van Fleet (shell pink) and Doubloons (Golden Yellow). If there be room for more, many people admire American Beauty but while it makes a brave show for a few days, the color soon fades to discordant magenta tones. Chastity—a beautiful white is more hardy than equally beautiful Silver Moon. Royal Scarlet is a splendid large flowered red—slightly darker than Paul's Scarlet, while Excelsa, a rapid growing very hardy small flowered crimson fills a useful place on fence or trellis and is not so subject to mildew—as its softer foliaged sister—Dorothy Perkins, in Ontario. For pillars, Allen Chandler—scarlet, and Paul's Lemon Pillar are outstanding—and all the above are hardy and do well in Ontario.

In conclusion—again we urge—if you haven't roses in your garden—do plan to have even a small bed of them this Spring! You're missing one of the very real pleasures in life if you don't.

JEAN HENRI NICOLAS

(AN APPRECIATION)

The world lost a great Rose Man when Dr. Nicolas passed away in his sleep at the Ten Eyck Hotel, Albany, N.Y., September 25, 1937.

He was on a tour of Rose gardens and Nurseries with friends from Buffalo at the time and expected to return to his home in Newark, N.Y., the day he failed to awaken. Dr. Nicolas has been prominent in the Rose World for several years, the last nine of which he was in charge of the research department of the Jackson & Perkins Company of Newark, N.Y. Before going to Newark he had had charge of research for the Conard-Pyle Company at West Grove, Pennsylvania.

Jean Henri Nicolas was born at Roubaix, France, August 13, 1875. He graduated from the University of France with degrees of Bachelor of Letters and Bachelor of Science and

won the Master of Arts degree at Le Sorbonne, which University awarded him the honorary degree of Doctor of Natural Science in 1934.

He served in the French Army with the rank of Captain of Artillery.

Prominent as a lecturer, he had told the story of the Rose to audiences in over two-thirds of the United States and was so popular that he was called back time and again to address the same audiences. Like many Americanized Frenchmen his English was at times rather difficult, but this turned out to be an asset, as audiences, in an endeavor to understand, paid strict attention when he was talking, thereby gathering more information than they would have from an easy speaker.

He was the author of three popular Rose books and was a regular contributor to magazines and newspapers.

His first book, "The Rose Manual" has just been re-issued, the text having been corrected and brought up to date shortly before his death. His second book, "A Year In the Rose Garden," was published in a popular priced series and his last work, "A Rose Odyssey," was published only last summer, and has a somewhat different appeal, being reminiscence of travels through European and American Rose centers, with anecdotes of the people who have made the Rose what it is today. It is a very human book and helps to bring the Queen of Flowers even nearer to us.

As a hybridizer, Dr. Nicolas has a number of popular roses to his credit, with thousands of seedlings left behind, some of which will probably be introduced later.

Of recent years he has worked with various species, seeking hardier plants with better foliage, but most of his introductions were regular Hybrid Tea or Polyantha types.

His best known varieties are Eclipse, Gloaming, Rocket, Mrs. Frances King, Polar Bear, Carillon, Leonard Barron, Rochester, Snowbank, Smiles and Yosemite.

In 1936 France decorated him with the "Merite Agricole" having a few years previously made him a Knight of the Legion of Honor of France, a decoration of which he was very proud.

He was a Trustee of the American Rose Society, Hon. Vice-President of the National Rose Society of England, Vice-President of the French Rose Society, Honorary Life Member of the German Rose Society, and an Honorary Life Member of the National Horticultural Society of France.

—R. Marion Hatton

AN APPRECIATION OF A ROSE ODYSSEY BY J. H. NICHOLAS*

By Ella Harcourt

Haven't you often wondered, when you walked around a carefully labeled rose garden or the R.S.O. Annual Rose Show and jotted down the names of admired beauties, who are these hybridists, these Poulsens, Pernetts, Dicksons and McGredys, etc., and where did they develop these roses and what friends and relations acted as god-parents and gave them those often all-too-extraordinary names? Well, if, like Kipling's Elephant's Child and myself, you are full of 'satiableness curiosity,' you will find the answers to many of your questions in the late Dr. J. H. Nicolas' last book, 'A Rose Odyssey.' In fact, it tells more things I wanted to know than any Rose Book I have ever read. Some of them are the elementary things one is afraid to show ignorance by asking about, others are highly technical, about soils and hybridizing, that you long to learn by heart and fire off at the next Rose Show.

Dr. Nicolas was one of those fortunate souls whose hobby was his business. The Preface to his book begins:—"This is not a rose book but a rose travelogue." And his object in writing it is so "rose lovers may have a more intimate contact with the Pernetts, Mallerins, Dots, Dicksons, McGredys, Lamberts, and others whose creations adorn their gardens."

As a native of France he, quite naturally, begins with that country, and observes with pride that France deserves the credit for the progress of the rose to its present point, and that it was the Empress Josephine who made rose culture become a vogue and "called the botanists, nurserymen and gardeners of her time to take up rose hybridization and surrounded herself with the famous rose enthusiasts of her day." With the mention of the first Hybrid Tea, 'La France,' developed in 1867 by Pierre Guillot, Dr. Nicolas takes us to Lyons and introduces us to the great Joseph Pernet-Ducher, the world's greatest hybridizer. The story of the development of the first clean, pure yellow roses and the beginning of that great Pernetiana strain is delightful reading, told with that blending of the intensely practical and the poetical which distinguishes the rosarian everywhere.

* "A Rose Odyssey" by Dr. J. H. Nicolas, published by Doubleday, Doran & Co. (Canada) Limited, Toronto, Canada.

Dr. Nicolas' travelogue then takes us to Switzerland, returns to Dijon where he gives the history of the great 'Gloire de Dijon' and makes us long for a Gulf Stream to flow up the St. Lawrence and give us a Tea Rose climate. Then it stops for a while at Varces near Grenoble in order to speak of Mallerin. Mallerin, I am ashamed to say, meant nothing to me, but the names of Mme. Cochet-Cochet, Rouge Mallerin, and Feu Pernet-Ducher made me read of his original ideas on hybridizing with respect.

After delightful excursions to the French and Italian Riviera and to Italy, Dr. Nicolas arrives in Spain and devotes a most entertaining chapter to the great Spanish hybridist, Pedro Dot. As we see clear yellow when the name Pernet is mentioned, so the name Dot suffuses it with crimson and golds and all the colours of the sunset. Do you remember seeing blooms of Mme. Gregoire Staechlin at the Rose Show? Well, she is a Spanish 'Dot' and you should read about her. The funny thing to me is that he used good old pale Frau Karl Druschki as his original strain for all his flaming roses. Here Dr. Nicolas goes into the question of soils and becomes extremely chemical, and if you have that kind of brain you will revel, and if you haven't, alas, you will skip! as I did and landed in Orleans where the name Barbier fixed my attention and I read the history of those lovely climbers, Alberic Barbier, Albertine and Jacotte, and the story of the Wichuraiana roses.

In his chapters on England, Dr. Nicolas pays tribute to Mr. Courtney Page, whom he calls the *deus ex machina* of the National Rose Society, and he speaks of many famous past presidents of that great Society, Dean Hole, Rev. F. Page Roberts, Dr. A. H. Williams (originator of the beautiful climber, Emily Gray, so many of us have loved and lost!) H. R. Darlington, etc. Of a well known English rosarian, Charles H. Rigg, he tells a believe-it-or-not story of how he was cured of arthritis in the legs by drinking a bottle of old burgundy a day. The doctor who prescribed this lives in Dijon but his name is withheld, I suppose to keep him from being mobbed by would-be patients! Dr. Nicolas gives Colchester as the most important centre of new roses near London. The Ben R. Cant nursery, founded in 1765 and the oldest rose hybridizing firm in England, is there. Those two exquisite roses, Rev. F. Page Roberts and Lady Forteviot came from them.

Let me quote a bit from the account of the Paul Bros., makers of British rose history, and their successors, Chaplin Bros.:—"Some of the celebrated Paul introductions are the lovely Mermaid (1918), . . . Paul's Scarlet Climber; the graceful Ophelia (1912), which was an important milestone in Hybrid-Tea breeding, both for garden use and forcing. Two other milestones in modern rose history are Liberty, a red rose from Dickson (1900), and Souvenir de Claudius Pernet (1920). It is safe to say that practically all our modern roses are descended from one, two or all of these great roses."

"The Paul firms have been succeeded by Chaplin Brothers composed of W. E. Chaplin and his seven sons. W. E. Chaplin is a great character. Eighty-five years old (in 1936), he is hale and hearty and the actual head of the firm, ruling his seven sons like a Dickens' character."

From England to Northern Ireland and the great names of McGredy and Dickson. The account of the four generations of Samuel McGredys and their amazing roses should interest anyone who has a Lady Alice Stanley, a Mrs. Henry Morse, a Margaret McGredy or a Mrs. Sam McGredy in his garden, (and if you haven't all these roses you should get them immediately!) There is a story of how Sam III found and propagated a real **blue** rose, much to the delight of the cut flower market. When his father, Sam II, heard of it he ordered the entire stock destroyed. "He would not allow the house of McGredy to be responsible for the deterioration of public taste, which he believed would come through the continuance of a blue rose." It is sad to hear that Sam McGredy III died at the early age of 38 and that the future of the dynasty lies in a little Samuel IV now six years old.

Equally interesting is the history of the old firm of Dickson, also handed down through several generations. "One of Dickson's roses made history,—Liberty, the ancestor of all modern red roses." But think also of Killarney, Lady Ashdown, Duchess of Wellington, Betty Uprichard, Dame Edith Helen, Edith Nellie Perkins, and Sir Henry Segrave as some of their achievements. The stories of the Dickson firm are delightful and depict characters as original as their roses.

In Holland I found the home of one of my best loved roses,—Feu Joseph Looymans; a posthumous seedling of P. J. Looymans of Oudenbosh. Imagine producing a rose like that and not living to see it,—like Beethoven never hearing the 9th Symphony! One of our newest beauties, Countess

Vandal, we owe to a Hollander, M. Leenders, as also the van Rossem family of roses.

In Germany I read to my surprise that the producer of Frau Karl Druschki and the Kaiserin Auguste Viktoria still lives and works; one, Peter Lambert of Trier on the Moselle River. (I had an idea that Frau Karl dated back to about the time of the Wars of the Roses!) You must read about Lambert and his interesting ideas on cultural methods. Another rose I dearly love, Wilhelm Kordes, comes from Germany. Dr. Nicolas says:—"Before the World War Kordes and Krause had a nursery in England, not far away from London. They were captured by the British before they could get away and were interned on the Isle of Man for the duration of the war. Perhaps thus were great rosarians saved to the world!"

Denmark, which we used to think of entirely in terms of butter and porcelain, has now become in our minds a land of Poulsen roses. What a debt we owe to those other inhabitants of a chilly climate for their skill and determination to produce a really beautiful strain of hardy roses. Here is a bit about them:—"The father, the late D. T. Poulsen, founded the business and left it to his three sons. His son Paul is the businessman and the father of Karen, a young woman of eighteen. Dineen, after bringing out Little Red Riding Hood and the Ellen Poulsen rose, the latter named for his sister, became the grower. He is the father of Else and Kirsten and Anne Mette, and husband of Harriett. Svend, the third brother, is the dreamer and propagator. Their fields of profuse rose blooms in that rolling and windy country stretch out like a waving flag with animated bars of white, yellow, pink and red."

The travelogue ends with a chapter on Australia contributed by our old friend Dr. Horace McFarland,—nothing I am sorry to say, about Canada, even in the chapter on Test Gardens. Oh well, we are young! The book ends with some very fine information on soils, fertilizers and atmospheric conditions, and in the last chapter of all returns to the Romance of Rose Names and gives an entertaining Who's Who of the original Dorothy Perkins, Dame Edith Helen, Caroline Testout, Julien Potin, etc.

Dr. Nicolas finishes with a protest against unpronounceable names. He cites a tradition of the Dutch Royal Horticultural Society that there must always be a rose named after

the new President. The present one is Jonkheer G. F. van Tets van Goigshaloord!

As I review this delightful book on the last day of the old year, with the north-east wind driving the frozen rain against the windows, I love to think that when you, my rose friends, read this we shall be on our way to Spring with rose plans in our minds once more. And I wish you a Happy New Year in your rose gardens and peace in the lovely old countries that have so enriched them. For, as one of the great hybridists so truly said,—“Roses have no frontiers.”

NOTES FROM ALBERTA

By H. W. Stiles, Edmonton

Another season has passed, and we have another tale of woe. The winter of 1935 and 1936 was indeed bad enough, with temperatures of 50 below zero, but we had a lot of snow which helped considerably. 1936 and 1937 was not so severe as regards temperatures, but we had very little snow, and the losses from winter killing were most severe, the writer losing over 80 per cent of all plants; in fact the only ones to escape such losses appeared to be those with a few plants who lifted them and stored in pits or root cellars during the winter.

This system of lifting the plants each year has never appealed to me, as it entails a lot of work in the spring, and one never has the satisfaction of knowing just what a plant is likely to produce in its second year, but as it appears to be the only way to bring the plants through I have adopted it this year.

Among those that survived last winter with me were Heros, Catherine Kordes, Madam A. Chatenay, Edina, Mrs. George Geary, Gipsy Lass, Flamingo, Fred. J. Harrison, Druschki Rubra, all of which gave me some nice bloom.

Among those planted last spring I found Lady Margaret Stewart a most suitable variety for this locality, also Miss Rowena Thom, Briarcliff, and Pedro Veyrat.

Old stagers like Mrs. John Laing, Captain Hayward, George Arends, Louis Van Houtte, were also well worth growing.

The months of June and July were too hot for words, and in spite of all the watering we could do, everything seemed

to be doomed, when a marvellous change occurred, and within 48 hours we had over 6 inches of rain, this being followed by frequent showers, so that in a week or two the transformation was almost phenomenal.

I do not remember autumn bloom so good and so plentiful in this district before, and the glorious weather lasted until the last week in September, when we had our first touch of frost, the weather however has continued fine and open, and as I write these notes October 20th, it is like a summer's day.

We have therefore had a fine chance to put the plants to bed (we hope safely) and look forward to another season with the usual optimism.

I tried a plant of the comparatively new variety "Leonard Barron" this season, which produced 3 blooms. I do not see anything to write home about in this variety. Each bud produced was as large as an hen's egg, before it opened, and the expanded blooms were fully 6 inches across, but beyond these features it reminded me of an exaggerated Glorie de Dijon, the colour and shape being very similar.

The growth of the plant was good, and the fragrance a somewhat redeeming feature, but it did not appear to be an ideal rose either for bedding or exhibition purposes.

At the trial grounds of The University of Alberta about 500 plants were set out last spring, and when inspected on August 9th appeared to have done very well indeed, the quantity and quality of bloom being all that could be desired.

I understand that these plants are being lifted and placed in cool cellars for the winter, hence we shall have to wait until next season for final results.

Having had an opportunity of trying out several varieties of understocks, we find that in this location there is not much to choose from, those budded on the seedling briar or Canina, being about equal to those on Multiflora Japonica, while climbers no matter what the understock may be, simply cannot be grown here, and Standards are in the same category.

Notwithstanding these severe handicaps we still intend to grow a few roses, for while we grow wonderful Gladiolus, Sweet Peas, Pansies, etc., no flower can take the place of The Rose which remains Queen of them all.

"ON ROSE SPORTS"

By N. S.

The Queen of Blossoms falsely fair
With crimson blush hangs her head,
For lo' the taint deep buried there
Transforms her to a "sport" instead.

To Rosarians, Rotarians, Kiwanis and other good men and true the phenomena of the "Rose Sport" presents many problems worth the studying. As every horticulturist knows, or should know, the rose is a temperamental blossom at the best of times, capricious in its demands for constant care, unpredictable in its habits of "drooping on the bough" just when you are most modestly boasting of your talent for getting such results out of "such a little garden."

As flowers go, it can be classed as an ingrate, biting the hand that feeds it with expensive fertilizer at \$1.75 the bag, and proudly flaunting championship form in the garden of some rank amateur who thinks a garden is just a space created by nature for sinking tomato cans and developing his putting skill. And speaking of golf, have you ever noticed how often it is that the men who play around in the low 70's are not the men with the matched irons and the swanky deluxe roadsters? But to return to our onions, or rather to our roses—"a rose by any other name"—as Gertrude Stien has so charmingly phrased it—"a rose is a rose is a rose is a rose" which after all, explains everything except why a rose with a perfectly respectable family name and ancestry should for apparently no reason become what these learned people term a "sport." It's all very puzzling and distressing having something to do with atavistic throwbacks or something which sounds like a good excuse for almost anything. And, as you know, or should know, if you belong to the Ontario Rose Society (annual fee \$1.00 including this handsome year book, free lectures, and a chance at the prizes, etc., etc.), or if you are a regular attender at the Annual Exhibitions, attended by all the best people, there are several kinds of "Rose Sports" not including Mr. Henry Button who is a swell auctioneer. These vary all the way from those out and out examples of the old school with pepper and salt sport suits, lapel nosebags and an "eye for a pretty girl dammit," to the frostily facetious if somewhat more austere professional gen-

tllemen who let themselves go at auctions and arrive home with the day's "bargain special" in bridal bouquets, white ribbon and everything. Personally, our belief is that Rose Sports of every kind should be taken as they come. After all, they add a spice of variety and do a swell promotional job for the seed experts and those perfectly poisonous people who delight to lean over your back fence and tell you what you should have done to produce the prize winning blooms you didn't get.

TWELVE OF THE BEST NEW ROSES

By George Nunn, Vancouver, B.C.

The year 1937 was a very good one for roses, with the exception of a couple of weeks in June when we had heavy rains.

We were, however, able to carry on our Flower Show and despite the rain it was very creditable.

It would be nice if we could get our rose growers here to show the same enthusiasm as our friends in the East. With the favorable conditions we have on the coast, it is surprising how few really get interested enough to exhibit.

I have selected what I think are perhaps the best twelve roses introduced in the last few years.

Sir Henry Seagrave (Dickson, 1932).—I think that this is the best rose introduced in recent years. It is one of the finest formed roses that we have had the pleasure of growing. Is a wonderful exhibition rose and will stand up well in a wet season.

Rex Anderson (McGredy, 1937).—A pale lemon yellow, beautiful form carried on long stems. Vigorous growth and a fine rose for garden or exhibition. Very good in the fall.

Mme. Cochet=Cochet (Mallerin, 1934).—A rose which produces long pointed buds of coppery pink and very attractive and fragrant.

Fred Walker (McGredy, 1935).—A fine pink rose with a coppery orange base. The blooms are well formed and very attractive.

McGredy's Pink (McGredy, 1933).—One of the best pinks: the blooms are well shaped and a rose suitable for either garden or exhibition purposes.

Southport (McGredy, 1933).—One of the finest reds introduced in recent years. Very brilliant color and blooms beautifully formed. A splendid bedding rose.

Picture (McGredy, 1932).—This rose was surely well named. And one of the grandest roses for the garden. It is free blooming and a grand addition to any collection.

Feu Pernet Ducher (Mallerin, 1934).—One of the finest yellows when well grown. The blooms are beautifully formed. It makes a very attractive exhibition rose.

Leading Lady (Dickson, 1935).—A rose of good form and a strong grower. The scent is particularly fine, and its shell pink color makes it very attractive.

McGredy's Yellow (McGredy, 1933).—One of the best new yellow roses introduced in recent years. It grows on long stems and is beautifully formed. While a bedding rose, it won for me the prize for "The Best Rose in the Show."

William Moore (McGredy, 1935).—Beautiful soft carmine pink of good form. A vigorous grower and a fine exhibition rose.

Portadown Fragrance (McGredy, 1931).—Very vigorous grower and beautifully perfumed. A good bedding rose and can be grown to exhibition size.

THE CYCLE OF THE ROSE

O lovely Rose, Queen of my garden flowers,
Often in Summer's happy hours
With joy and gladness I admire
Thy colour, form, and fragrance.

Too soon in mellow Autumn days
Thy tinted petals fade and fall,
Leaving their leafless stems to show
Their thick-set thorns in serried row.

O lovely Rose, when Winter frosts assail thee
And Memory of things that were,
Joins hands with Hope of things to be,
May kindly Fates preserve thee.

To love, and life, in Springtime Nature calls,
Yet first in me to faith—to sacrifice
Of thee, dear Rose, the gifts thou gavest
So to enable thee to give me greater.

A. H. (N.R.S. Annual, 1936).

NEW AND OLD ROSES MINGLE AT GLENHOLME

By Henry Bertram, Dundas, Ontario.

(Editors' Notes:—We consider it a great honour to present the following from Mr. Bertram, a rosarian of long experience, rare discrimination and unfailing enthusiasm, in his own words, "As keenly interested in Rose growing as when I first made the plunge into the hobby.")

The Rose Season of 1937 should be classed as outstanding in many ways in this part of Ontario, because of an ample rainfall combined with a moderate temperature, which are ideal conditions to produce excellent growth and bloom.

The bitter experience we came through in 1936, with its high temperature and practically no rain, necessitated continual surface cultivation in order to conserve the natural moisture in the earth. In this valley our domestic water supply failed and we were obliged to revert to a water-can and carry it from the pump.

I found 1937 very suitable for the Reds. Those I have growing are Crimson Glory, W. E. Chaplin, Heros, Fritz Hoyer, Duchess Montrose, Earl Haig, Chas. P. Kilham, Hortulanus Budde, Gipsy Lass, Dr. A. J. Petyt, Etoile de Hollande and Temno, the almost black.

In H.P.'s.—Gloire de C. Guinoisseau, a fine red if cut when the bud starts to open, the day old blooms are bluish; Henry Nevard, a vigorous grower, and Hugh Dickson.

In the Yellows I had Alice Harding, Esperanto, Goldenes Mainz, Sir Henry Seagrave, Mrs. E. P. Thom, Julien Potin, Sunburst, Eclipse, Souvenir de Claudius Pernet (the old reliable), Feu Pernet-Ducher, Glowing Sunset, Klondyke (a good golden color), Lady Forteviot, Roselandia, Golden Ophelia.

In the White H.T.'s, the following:—Polar Bear, White Briarcliff, Caledonia, Clarice Goodacre, Edith Krause, Kaiserin Augusta Victoria, Madame Jules Bouche (one of the best), Mrs. Herbert Stevens (a Tea but hardy), Innocence, Mrs. Chas. Lamplough, Prince de Bulgarie (not fashionable these days but a good Rose), and Oswald Sieper.

My H.P.'s are Frau Karl Druschki, Candeur Lyonnaise, Margaret Dickson and Mad. Plantier, and a good Poly. in Snowbank.

In Pinks there are Capt. Harvey Cant, Mrs. Henry Morse, Comtesse Vandal, Rose Berkley, Elizabeth of York, Mrs. J. H. Welch, Lady Ashtown, Una Wallace, Christoph Weigand, E. J. Ludding, America and Mrs. A. R. Barraclough.

The H.P.'s are the following:—George Arends, Mrs. John Laing and S. M. Gustave V. Sweden (a good re-bloomer).

I had considered for some time trying a bed of Polys. for mass colors. I therefore prepared an eight foot round bed in the Autumn of 1935 and in it planted the following spring, in two circle rows, alternating Else and Kirsten Poulsen with a centre plant of Permanent Wave. This bed gave abundance of bloom till frost came.

In the mixed colors, I name those giving a good return—The McGredy family of eight, Alezane, Ambassador, Betty Upchurch, Carillon, Rochester, Mme. Raymond Gaujard, Madame Cochet-Cochet, Gorgeous, Autumn, Herbert Hoover, Admiration, Madame E. Herriot, Edith Nellie Perkins and Madame Nicolas Aussel.

The Climbers include New Dawn, Paul's Scarlet, Blaze, American Pillar, Dr. VanFleet, Chaplin's Pink, White Dorothy, Gloire de Dijon (growing for over fifty years in one place), Vanguard (Pillar), Cornelia, Allen Chandler, Madame Gregoire Staechelin, Scorchers, Hugh Dickson and Royal Scarlet.

For winter protection of bush roses I hill up about the bushes, which are first drawn close together with grape twine. This prevents the wind from loosening the mound. In Climbers, I hill up ten inches, tie the canes in a bunch and lay them on the ground, covering with spruce and cedar boughs. This conserves the snowfall and seems to protect the growth. It must be remembered that ripening of the canes is essential to life. Of course, all old growth is cut out before laying down.

An important feature is to spray or dust as soon as leaves open. I use soft coal soot as a fertilizer.

In conclusion, may I hope for an increasing interest in Rose growing by those having small gardens, and attend the Rose Show with their best.

NOTES ON NOVELTIES

By A. J. Webster, Toronto

The extremely favourable weather conditions which prevailed during the early portion of the 1937 Rose season enabled us to visualize the potentialities of certain varieties which, highly praised by their fond originators, had previously behaved very badly for us. We also had the unusual and pleasant experience of observing Rose varieties actually measure up in performance to the extravagant claims made for them in the catalogues. For instance, we saw for the first time a bloom of McGredy's Scarlet that might be described as scarlet in colour; we also had several blooms of Talisman that could be recognized as such from their similarity to the Talisman blooms which we see in shop windows; we had a gorgeous display of bloom on Mrs. Arthur Curtiss James after waiting four years; we had Paul's Scarlet Climber produce a few blooms in October; we had two plants of the notoriously tender Emily Gray survive the winter with little or no loss of wood and produce a generous crop of her charming, soft yellow blooms; we had a plant of the Hybrid Tea, Duchess of York, throw up one cane on which appeared golden yellow blooms instead of the customary tangerine-orange tones; we had the unique experience of observing blooms of Hadley remain crimson for two whole days. All these phenomena have given us cause for reflection, and have served to strengthen our faith in the Rose, and also our confidence in the veracity and good faith of the catalogue writers. We are convinced now that the claims which these gentlemen make may be possible of realization under the most favourable circumstances!

The following notes on a few of the newer varieties are based upon observations, chiefly of performance in my own garden, but also to some extent on their behaviour in the gardens of my friends. My own plants are grown in a clay loam soil, with a south and south-eastern sun exposure. The great majority are budded on the *rosa canina* understock. In a few cases where my experience with a given variety covers only the one season, that fact is indicated, and the comments respecting them are not necessarily authoritative, representing merely first impressions.

HYBRID POLYANTHAS

Anne Poulson, H. Poly. (Poulson, 1935). While this variety has been very satisfying in my garden I have observed it doing even better elsewhere, particular in Mentor, Ohio. I consider it a valuable acquisition in its class.

Betty Prior, H. Poly. (Prior, 1934).—Its erect and vigorous growth make it suitable for hedge work; satisfactory in all respects save the serious colour fading in warm weather.

Donald Prior, H. Poly. (Prior, 1934).—This is its first season and, while the colour is a very brilliant scarlet, the growth thus far has been weaker than I had been led to expect.

Fortschritt, H. Poly. (Kordes, 1933).—Vigorous and free-blooming; the colour, reminiscent of *Ophelia*, is attractive in the early stages of development but it becomes very ordinary with age.

Karen Poulsen, H. Poly. (Poulsen, 1933).—With me the colour is excellent, the individual blooms large, but the growth is only moderate. It will not supersede Kirsten Poulsen.

Madge Prior, H. Poly. (Prior, 1934).—Vigorous, branching, and free-blooming. The claret colour is unique and it fades very little. Should not be planted in close association with other red shades but it is very effective when massed by itself. Awarded a Certificate of Merit in The R.S. of O. Test Garden, 1937.

Mevrouw Van Straaten Van Nes, H. Poly. (Leenders, 1934).—Very distinctive, and altogether satisfactory if one is careful to remove faded blooms promptly.

CLIMBERS

Climbing Etoile de Hollande, Cl. H.T. (Leenders, 1932).—Exceedingly effective when established but thus far I have had no recurrent bloom.

Crimson Conquest, H. W. (Chaplin, 1931).—Wonderful crimson colour which is well-maintained. Very free when established, and apparently worth growing.

Doubloons, H. Set. (Horvath, 1934).—Undoubtedly the most reliable of the yellow Climbers introduced to date. Free-blooming, and reasonably hardy, and, while the colour fades, Doubloons is still an excellent variety.

Easlea's Golden Rambler, H.W. (Easlea, 1932).—Vigorous and free, but the colour is only attractive in the early stages of development. The foliage is very beautiful and the plants seem hardy in the average winter without protection.

Mrs. Arthur Curtiss James, H.W., (Brownell, 1933).—In its fourth season it produced a fine display of bloom, and the blooms were very lovely with respect to both form and colour. I noted very little fading. Apparently patience is required with this Rose but the blooms are worth waiting for.

HYBRID TEAS AND PERNETIANAS

Annie Brandt, H. Per. (Mallerin, 1934).—Delightful, long buds of an attractive orange-salmon shade, produced on lengthy, erect stems. While the blooms have only fifteen to twenty petals they are of fairly heavy texture and the bud stage is retained for a longer period than is usual with semi-double varieties. I am fond of this Rose.

Anni Jebens, H. Per. (Kordes, 1932).—Colour seems to be the only virtue—a striking combination of vermilion and yellow. Weak growth.

Bonnie Jean, H.T. (Archer, 1933).—First season; two plants. This single Rose was somewhat disappointing in colour although otherwise satisfactory. The blooms were produced freely but the colour lacked life.

Catalonia, H. Per. (Dot, 1933).—A sensational decorative Rose which, in the moist 1937 season, was outstanding, but which in a hot, dry summer loses colour badly. The form of the blooms is not ideal, but the plants seem to have a good constitution. Worth growing for colour effect.

Christopher Stone, H.T. (Robinson, 1934).—Attractive, semi-double blooms of a sparkling scarlet colour on plants of moderate growth. I still prefer *Hortulanus Budde* which was introduced in 1919.

Col. Sharman Crawford, H.T. (Dickson, 1933).—This Rose thoroughly enjoyed the ample rainfall of the 1937 season. It produced freely blooms of extreme richness of colour, excellent form and substance, and powerful fragrance in three crops. The variety is capricious, however, and sulks in a dry season.

COPYRIGHT 1937 BY JACKSON & PERKINS CO.

ALICE HARDING
New Everblooming Rose

Condesa de Sastago, H. Per. (Dot, 1933).—One tires of fancy cock-tails and longs for a reliable old Scotch-and-soda. The sharp colour contrast is certainly arresting to the eye, but the bright shades disappear quickly. The growth is vigorous and the bloom is freely produced.

Crimson Glory, H.T. (Kordes, 1935).—First year. Results to date entirely support the hymns of praise which have been sung on three Continents regarding this Rose. It gives promise of occupying a place at or near the top amongst the crimson shades. The fragrance is outstanding.

Daisy Bud, H.T. (Dickson, 1933).—I still like it although no one else appears to know its charms.

Destiny, H.T. (Beckwith, 1935).—First year. Disappointing to date with respect to both growth and colour. I am hoping for better results in 1938.

Dorothy McGredy, H. Per. (McGredy, 1936).—A plague centre for Blackspot, and generally unsatisfactory. The blooms, while produced very freely, lack substance, and their delightful colour is very fleeting. I much prefer the old Queen Alexandra Rose.

Eclipse, H. Per. (Nicolas, 1936).—First year. Growth only moderate. Buds delightful in both form and colour but the open blooms are less distinctive. I am hopeful of a bright future for this Rose which I have observed doing extremely well elsewhere.

Edina, H.T. (Dobbie, 1934).—I still consider this to be a fine bedding variety, and its behaviour in the Society's Test Garden seems to support that view. Its productiveness and its notable fragrance, as well as the form of its blooms, are outstanding. The colour is white, with a faint rose shading in the centre.

George Chesnel, H.T. (Gaujard, 1934).—First year results have been quite satisfactory. The colour is a brilliant coppery-yellow—a very striking shade. This variety looks promising as a garden decorative type.

Gloaming, H.T. (Nicolas, 1936).—While this Rose in its first year did not distinguish itself in my garden I have observed established plants doing exceedingly well elsewhere. The form of the blooms is acceptable and the salmon shade very attractive. It also has the added attribute of fragrance. I shall observe it with hopeful interest this year.

Goldenes Mainz, Per. (Kordes, 1933).—My previous impressions have been confirmed, viz., a useful decorative variety of the most intense yellow colour which is well maintained regardless of weather conditions. The shape of the bloom is poor but the plant is healthy and productive.

Ian Phillips, H. Per. (Dickson, 1934).—Satisfactory with respect to growth and productivity. The colour is a pale yellow shade and the blooms are of fair quality, but I can see no justification for planting this Rose when we can obtain Julien Potin.

Katherine Pechtold, H.T. (Verschuren, 1934).—While this Rose has accomplished practically nothing for me, it is well regarded by Mr. D. C. Patton, whose opinions I respect. It is attractive in the bud stage and makes a colourful boutonniere, but the open blooms are of little value.

Kidway, H.T. (Pernet-Ducher, 1933).—In its first year this Rose has somewhat intrigued me. The soft, orange-yellow blooms are very attractive but the growth to date has been only moderate, and I must withhold judgment.

Korovo, H.T. (Leenders, 1931).—While no longer a novelty this Rose appears to have been overlooked. It was introduced along with Comtesse Vandal, and in the excitement over the latter the excellent qualities of Korovo were disregarded. It has merit, however, and is worthy of a trial by all discriminating growers.

Lord Lonsdale, H.T. (Dickson, 1933).—Difficult but exciting! This is a temperamental yellow, which, when good, is very good. It does not always behave well but the moist 1937 season evidently suited it. The blooms were of approved shape and splendid substance but it is a Rose for the connoisseur.

Mme. Cochet-Cochet, H.T. (Mallerin, 1934).—The colour is similar to that of Los Angeles but the form reminds me of May Wettern. This Rose shows definite promise of achieving greatness.

Mme. Jules Guerin, H.T. (Reymond, 1929).—This Rose is no longer new, but I am including it because of its outstanding qualities and because of the confusion which has resulted from its four names, viz.: Mme. Jules Guerin, President Charles Hain, Amelia Earhart and Magnum Pernet. The leading British catalogues now list it as President Charles Hain, and it is in my opinion the best yellow exhibition variety. It is not free-blooming but each bloom carries a thrill. It appears to resent severe pruning.

Marmion, H.T. (Dobbie, 1934).—While producing freely beautiful, shapely blooms of salmon-amber tones, the foliage is very susceptible to Blackspot.

Matador, H.T. (Van Rossem, 1935).—First year. While the growth seems vigorous, the fragrance powerful, and the blooms of fair quality, yet the crimson-maroon colour of the buds and young flowers develops bluish-purple tints that are distinctly objectionable. Otherwise I have little criticism to offer.

McGredy's Gem, H.T. (McGredy, 1933).—Growth strong; the blooms resemble somewhat those of Madame Butterfly but lack fragrance.

McGredy's Peach, H.T. (McGredy, 1933).—Growth moderate; colour creamy-salmon; the first crop blooms are large and substantial but those of subsequent production taper off badly in quality.

McGredy's Pink, H.T. (McGredy, 1936).—Apparently a good, reliable pink variety, but the competition in the pink shades is so keen that a new variety must be of superlative merit if it is to achieve widespread popularity.

McGredy's Triumph, H.T. (McGredy, 1934).—Here is a friendly Rose—one that will thrive under widely varying conditions. The growth is strong and branching, and the large blooms, of geranium-red colour with an orange base, are freely produced. Try it.

McGredy's Yellow, H.T. (McGredy, 1933).—Undoubtedly one of the best of its shade amongst bedding varieties and the first-crop blooms are usually up to exhibition form. The growth is vigorous and the foliage healthy.

Memory, H.T. (B. R. Cant, 1933).—The fragrance is noteworthy and the first bloom of the season sensational in size although semi-double. The petals are large and of heavy texture. Fault: the silvery-pink colour develops lavender shades with age.

Olive Cook, H.T. (Frank Cant, 1934).—Looks as if we might have something here. First year results indicate vigorous growth, and large,

pure white, lasting exhibition blooms which open cleanly in all kinds of weather. Considering the high quality of the blooms they are freely produced.

Oswald Sieper, H.T. (Krause, 1932).—Another white variety which has definitely established itself as one of the best of its class. The blooms are of excellent shape and ample substance, and have a faint sulphur tone in the centre.

Phyllis Gold, H.T. (Robinson, 1935).—While this Rose has earned favourable comment in Europe its performance with me thus far has been disappointing. The growth has been only moderate, the colour washy, and the blooms few in number.

Picture, H.T. (McGredy, 1932).—Shapely little blooms freely produced on symmetrical plants. An ideal bedding type and worthy of a place in every garden.

Princess Marina, H.T. (Robinson, 1936).—Very promising in its first year. The colour is an attractive combination of apricot and salmon, with the outer petals richly stained copper. If something distinctive is desired try this one.

Reward, H.T. (Dickson, 1934).—This variety shares with Eclipse the honours for length and elegance of buds, but, unlike Eclipse, Reward holds its bud form for several days owing to the greater petalage and the heavier texture of the petals. The colour is a delicate pink, blended with yellow and orange. I find the growth only moderate.

Rex Anderson, H.T. (McGredy, 1937).—First year results indicate that this will be an important exhibition Rose in the pale yellow class. The growth is strong but thus far it has been somewhat shy in bloom production.

Rouge Mallerin, H.T. (Mallerin, 1934).—I hesitate to discuss this Rose because of its tremendous reputation, but the fact remains that its behaviour has been below what I had expected. I shall continue another season to watch it with interest.

Simone Guerin, H.T. (Mallerin, 1932).—I still like this as a garden decorative variety because it holds its orange tones longer than do either Emma Wright or Gotha. It also has a few more petals than has Emma Wright.

Sir Henry Segrave, H.T. (Dickson, 1932).—My regard for this Rose remains undiminished after one more season's experience with it. Clean, attractive colour, perfection of form, vigorous growth, and productivity all combine to justify its inclusion in every collection of Roses.

Southport, H.T. (McGredy, 1933).—A particularly brilliant scarlet bedding variety with little or no fragrance, but erect, vigorous growth. The colour is well maintained but I consider the plants to be somewhat stingy with their blooms. As a matter of interest I record that this variety ranks "tops" amongst the red shades in the opinion of that widely recognized authority, Colonel Hugh A. Rose.

Sterling, H.T. (E. G. Hill, 1934).—First year. The results to date indicate that this rose-pink, shapely and fragrant variety has considerable merit. The growth has been fair and the foliage healthy.

Wilhelm Breder, H.T. (Kordes, 1933).—After three years my impression is that this Rose has been much over-rated. The growth is only moderate and the colour with me is a confused, indistinct and unattractive combination of pink and yellow.

RANDOM NOTES

Yarmouth, N.S.—Miss Margaret Eakins, down by the sea, has somewhat different Rose problems than we in Ontario, with open winters and late springs. Late fall is the best time for moving and planting roses—giving the usual protection of hilling up and then covering with evergreen boughs. Miss Eakins has found autumn application of barnyard manures unsatisfactory and now uses one of the commercial fertilizers and liquid manure during the growing season. Favorite roses in her garden are The General, Trigo, Flamingo, and that lovely pillar rose, Paul's Lemon.

St. Catharines, Ontario.—Mrs. Arthur Blundell, a successful exhibitor of roses at The Annual Show for many years, urges early and continual spraying or dusting of the rose plants. Mrs. Blundell sprays the bushes with lime sulphur mixture while still dormant, uses Massey dust as soon as the new leaves appear and continues with the dusting at ten day intervals.

Niagara Falls, Ontario.—Dr. George D. Snyder writes that the roses were especially satisfactory and free blooming last season. For a handsome border of climbing roses, the Doctor recommends Paul's Scarlet and Primrose planted alternately. The contrast is very pleasing.

London, Ontario.—Mr. C. E. German tells that 1937 was the most satisfactory year for roses since he started to grow them—and Mr. German is no novice. There was an abundance of bloom, vigor of growth and fine quality of flowers until the bushes were covered for the winter. McGredy's Ivory was an outstanding bloomer in the garden, Comtesse Vandal had lovely flowers of true form and Mev. Van Ness (Permanent Wave), with its vigor and many crinkled flowers was attractive and greatly admired. Continuous spraying to the very end of the season to insure freedom from mildew and blackspot is recommended. Mr. German pins his faith to Triogen.

LONG AND SHORT PRUNING

By Herbert Oppenheimer, Deputy President, N.R.S.

The question of long or short pruning does not arise as regards the first pruning after planting; short of cutting away the Rose bush altogether, and leaving only the stock, you cannot prune too hard. During the month of March, after the first pruning, the Rose plants should be practically invisible in their beds; i.e., the inch or so of soil left above the junction of stock and scion should cover, or nearly cover, all that is left on the plant. Only a very small minority of Rosarians recommend long pruning during the first year after planting. I can only assume that they grow their Roses on soil which is too poor to produce from the dormant basal buds those strong, healthy shoots on which we rely to build up strong, healthy plants, and have, therefore, to be content with the less vigorous and rather unsatisfactory side-shoots which develop from plump buds on the wood which they receive from the Nursery. I was by no means prejudiced on the subject, and have experimented time after time by leaving a foot or more of strong, sound wood at the first pruning, but the result has always been the same; the growth and blooms on the side-shoots from the old wood have been poor, and had ultimately to be removed, and the development of the basal growth was more or less retarded; the root system which is then only in course of establishing itself cannot yet perform the double task. My advice under all normal conditions therefore is: Prune short—very short—the first time after planting.

Next let us consider what is meant by "long pruning." Some people think that it means just snipping off the weak, or frostbitten, tips of shoots; but any such method will result only in a mass of spindly, tangled growth, and worthless flowers. Indeed, paradoxical though it may sound, it is undoubtedly a fact that the longer we prune the more we must prune, or rather, thin out. An established plant of a vigorous variety which has been pruned long and not Autumn thinned will, at Spring-time, have 50 or more shoots, with something like 300 eyes, all or most of which will start into growth if left alone. In long pruning we select for retention anything from 10 to 25 of the strongest and best placed shoots, according to the stage of development and vigour of the plant. All growths other than those so selected are completely cut away. Some of the selected shoots will be basal shoots,

others will be young laterals starting from the older wood. The selected shoots are then pruned, some being left nearly full length, others cut down more or less severely to different lengths, the object being to have a tall, shapely, open bush, which in due course will produce a goodly number of flower shoots all over. On each of the selected shoots from two to four eyes are allowed to develop in the desired positions, all others being removed in the early stages. Thus treated, a Rose plant should, during its first flower period, produce anything from 20 to 50 blooms, or trusses, and that is surely enough to satisfy the most enthusiastic long pruner! After the first flowering, a drastic thinning out will be required, to obviate the plant becoming overcrowded.

This method of long pruning undoubtedly gives best results with those strong-growing, free-flowering, decorative varieties such as Red Letter Day, Kirsten Poulsen, and Else Poulsen, from which we require mainly abundance and continuity of bloom. Their vitality is so great that they will, at the same time and all the time, produce a generous supply of basal shoots, laterals, foliage, and flowers.

Another class of Roses which by common consent does best when pruned long are the extra strong growing varieties such as Hugh Dickson, Frau Karl Druschki, and J. G. Glassford. Their vigour is such that if you prune them hard, the top eyes will take up the running and often produce long, unwieldy shoots 6-ft. long and more, but the flowers will be few and far between, will arrive late, and then a goodly percentage will be split or mis-shapen.

So far we have dealt with aspects of our subject on which there is a large measure of general agreement; we must now consider the most important part of it, on which there is much controversy, viz., that large class of Roses of vigorous or moderate growth which is cultivated both for garden decoration and for beauty of the individual flower. The advocates of short pruning assert that long pruning will result in leggy plants, weak top growth, and disappointing blooms, and prevents or minimises the production of strong basal shoots, on which the health and long life of the plant depend. The protagonists of long pruning, on the other hand, contend that their method results in stronger and more prolific growth, and in larger and healthier plants, and yields more and better quality blooms, whereas short pruning gives a shock to the plant, injures it, and prevents its healthy development.

The last mentioned contention gives rise to least difficulty, for it is unsound in theory, and disproved in practice, as becomes obvious when we consider maiden plants. What is the maiden plant in the February after budding? It is an established briar bush in the bark of which, immediately above the roots, one bud has been inserted. And how do we all (long pruners included) prune it? We prune it harder than the most rabid short pruner of exhibition Roses would prune a Bessie Brown; we chop off the whole of the plant with the solitary exception of that one little bud just above the roots. And what is the result of that shock? Within a few months that one little bud is transformed into a splendid Rose bush.

However, the unsoundness of that theory does not, by any means, dispose of the matter. Many of the long pruners are experienced and enthusiastic Rosarians, and in practice they undoubtedly, by their method, achieve the results which they claim; if by following their example we could all produce those 6-ft. high Ophelias with 30 simultaneous blooms 6-in. across, we should all be long pruners. But, say the short pruners, we are not pigheaded, we strive for the best; we have tried long pruning time after time, and the results have been lamentable. And don't forget that many of the most successful and skilled Rose-growers in the Kingdom are convinced short pruners, so which method is right?

Then what are we to do about pruning the varieties now under consideration? Undoubtedly those who achieve the results they desire either by long pruning or by short pruning, should continue the method which they have found to answer best in actual practice. Those who are in doubt cannot do better than experiment for themselves by trying both methods, and ascertaining from their own experience which of them is more successful under their particular conditions, either generally, or as regards individual varieties. If, however, owing to considerations of space, or from want of time, or lack of patience, or any other reasons, you cannot, or will not, experiment for yourself, then you should undoubtedly prune more or less short, in accordance with the instructions set out in detail in the Society's handbook. If by practising that method you find that your Rose plants run to growth, if there is too much strong and long wood, and too few flowers, if your plants behave as if they were a sort of halfway house between a dwarf Rose and a climbing sport, then by all means try long pruning, and possibly your difficulties may be solved.

Abridged and reprinted by the kind permission of the National Rose Society.

The Constitution

I. The members of the Society hereby constitute themselves The Rose Society of Ontario, the seat of which shall be at Toronto, where the Records and Library shall be kept.

II. The purposes of the Society are to study, cultivate and exhibit Roses, award prizes for cultivation, exhibition of and essays upon Roses and Rose Culture; to acquire a Library on Rose Culture and generally to further and encourage the cultivation and study of Roses.

III. The Society shall consist of its Members and such additional persons as shall from time to time be admitted to membership by the Board of Directors, on payment of the fees prescribed by the rules.

IV. The members of the Society shall elect by ballot from amongst themselves a Board of Directors, to consist of twenty members, of whom six shall form an Advisory Board, and such Board of Directors shall make rules, and perform all executive and administrative duties; and six shall form a quorum. The Board of Directors shall elect a President and four Vice-Presidents, who shall hold office for one year, and who shall be eligible for re-election.

V. The Board of Directors shall hold office for one year from the date of their election, and until their successors shall be elected, and all members thereof shall be eligible for re-election.

VI. The Board of Directors shall appoint a Secretary and a Treasurer, both of which offices may be held by one person, who shall hold office during the pleasure of the Board, and shall perform such duties as the Board may direct.

VII. Any member of the Board of Directors who shall be successively absent from three duly called meetings thereof, without the consent of the Board, shall thereupon cease to be a member of the Board, who may then proceed to fill the vacancy as hereinafter provided.

VIII. If any vacancy occurs in the Board of Directors, by the death, resignation or inability to act, of any of the members thereof, the other members of the Board may appoint another to fill his or her place, to hold office on the same terms as the other members of the Board.

IX. The members of the Society in any city or town or other district of Ontario to be defined by the Board of Directors, may, with the approval of the Board, appoint a committee for such city or town or other district, and may elect a presiding officer thereof, to be called the (name of the city, town or district) Vice-President, for the management of such local affairs of the Society not inconsistent with the Constitution and Rules, as may be necessary, and members so acting may adopt the name of The Rose Society of Ontario (name of city, town or district) Branch.

X. Exhibitions shall be held in Toronto, and may be held at other points in Ontario, at times to be decided upon by the Board of Directors, and prizes may be given at such Exhibitions.

XI. All competitions for prizes shall be divided into the following classes:—

Class 1.—Professional.—Comprising all such persons or corporations as carry on the trade of growing and selling flowers.

Class 2.—Semi-Professional.—Comprising all persons who do not grow flowers for profit, but who keep gardeners, not otherwise employed.

Class 3.—Semi-Amateur.—Comprising all persons who do not grow flowers for profit, but who have the occasional assistance of gardeners in the cultivation of Roses, not solely employed by themselves.

Class 4.—Amateur.—Comprising all those persons who do not grow flowers for profit, and who cultivate Roses without the assistance of skilled gardeners, but who may employ a labourer.

Class 5.—Novice.—Comprising amateurs who have never exhibited before.

NOTE:—Amateurs and Semi-Amateurs may compete in the Professional and Semi-Professional classes, but the Professionals and Semi-Professionals may not compete in the Amateur and Semi-Amateur classes. XII. The Constitution may be changed in any respect by a two-thirds vote of the members present at any annual meeting of the Society.

XIII. A general meeting of the members of the Society shall be held at such place in the City of Toronto as the Board of Directors may appoint, in the month of December each year, on such day as the Board shall appoint for the purpose of receiving a report from the Board of all matters of interest and business during the preceding year, and for all other general purposes relating to the management of the Society, and at such meeting, a full statement of the finances of the Society for the year shall be submitted by the Board. Notice of such annual meeting shall be mailed to each member of the Society not later than ten days before such a meeting shall be held.

XIV. A special meeting of the members of the Society may be called by the President at any time, or such a special meeting shall be held upon the written application to the President of not less than twenty members of the Society, to consider any specified business. The President shall at the first ensuing meeting of the Board of Directors lay such application before the meeting and the Board shall appoint a date for such special meeting to be held within the succeeding two weeks at some place in the City of Toronto, and the members shall be notified by mail not later than ten days before such a meeting shall be held.

XV. The Board of Directors may elect from among the members of the Society, in recognition of outstanding services, an Honourary President and four Honourary Vice-Presidents, each to hold office for one year and be eligible for re-election. The Honourary President may be a member of the Board of Directors ex-officio.

Rules of the Rose Society of Ontario

1. The subscription to The Rose Society of Ontario shall be one dollar per annum for ordinary members, and five dollars for sustaining members, payable in advance on the date of the annual meeting, and not later than the first day of January of each year.

2. The Rose Society's year shall end on 30th November in each calendar year and the accounts shall be made up as at that date for presentation to the annual meeting.

3. Any member may, upon payment of twenty-five dollars (\$25.00) be declared a Life Member.

4. The Board of Directors may form such committees as may be necessary for the transaction of business.

5. Lectures and instructions upon Roses and their culture shall be given under the auspices of the Society, at such times and places as the Board of Directors may determine.

6. The Board of Directors shall have power to appoint such persons, not necessarily members of the Society, as may be necessary for arranging for the Exhibition.

7. Affiliation by Horticultural or other Rose societies may be granted upon payment of a fee of five dollars (\$5.00), or through membership. In the latter event to qualify at least ten members of the society applying for affiliation must be members of The Rose Society of Ontario. Affiliated societies are entitled to a silver medal from The Rose Society of Ontario for competition in the Rose sections of their local shows, provided, however, that there are at least three exhibitors in the competition for this medal.

8. The President may appoint a Nominating Committee whose duty it will be to prepare a list of twenty members who, from their interest in the Society, will undertake to act on the Board of Directors, and shall nominate the same at the General Meeting. These names shall be printed on a ballot slip, but such action of a Nominating Committee shall not prevent further alternative names being added by members by nomination at the General Meeting.

By-Laws

(Defining the duties of the officers and Board of Directors.)

1. Special meetings may be called at any time by order of the President, and may be called at the written request of five members, notice of which shall be sent to each member by mail, such notice to specify the business which is the occasion of the call. No business other than that mentioned shall be transacted at such meeting.

2. The hour of meeting shall be eight o'clock p.m., unless otherwise ordered by the President or Chairman.

3. It shall be the duty of the President to preside at all meetings of the Society, to enforce strict observance of the Constitution, Rules and By-Laws of the Society, to appoint all committees not otherwise provided for, to approve all orders drawn on the Treasurer for appropriations of money made and passed at a meeting of the Board of Directors, and to perform such other duties as his official charge may require of him.

4. It shall be the duty of one of the Vice-Presidents in the order of his seniority, to preside at all meetings of the Society in the absence of the President. If none are present the Society shall elect a president pro tempore.

5. It shall be the duty of the Honorary Secretary to keep correct minutes of the proceedings of the Society, to keep a list of all members, of the time and place of all meetings in such manner as may be directed, and advise them of all notices of motion in accordance with the Constitution. He shall receive and pay over to the Treasurer all moneys due and belonging to the Society, receiving receipt therefor, and shall draw and countersign all orders on the Treasurer, approved by the President. It shall be his duty to keep record of all meetings of the Board of Directors and each member's attendance at such meetings, and in his annual report state the number of meetings held and how many each member attended. He shall also preserve all books, papers and other documents belonging to the Society, and upon retiring from office deliver all such to his successor. He shall perform all other duties usually pertaining to that office, and at the annual meeting render a complete report of the membership and condition of the Society.

6. The Treasurer shall receive from the Honorary Secretary all moneys, giving a receipt therefor, and pay them out only on an authorized order from the Secretary, approved by the Board of Directors, and countersigned by the President or nominee of the Board. He shall keep a proper record of his receipts and disbursements, subject to the inspection of the Society, and shall deliver to his successor all moneys, books and other property belonging to the Society which may be in his possession, and at the annual meeting or when otherwise required, he shall furnish a complete report of his office, producing vouchers for all moneys paid out. He shall furnish such bond for the faithful performance of his duties as the Board shall direct, the cost of same to be paid by the Society.

7. It shall be the duty of the Board of Directors to have full charge of the working interests of the Society; they shall aid the President in the management of the Society between its sessions, and shall report on such matters as may be assigned to them for consideration on a vote of the Society at its meetings.

8. All members of the Society who are in good standing shall be eligible for any office in the Society. The President, Vice-Presidents, Secretary, and Treasurer shall be ex-officio members of all committees.

9. Six Directors shall constitute a quorum for the transaction of business at any authorized meeting of the Board.

10. The member named first on any committee shall act as Chairman until another is chosen by the said committee.

11. Parliamentary usages shall be observed in all debates and discussions.

12. In the election of officers, a ballot shall be taken for the President and the Vice-Presidents, and it shall require a majority of the votes cast to elect each such officer, and when three or more candidates are nominated, the one receiving the lowest number of votes on each ballot shall be dropped from the list, until only two remain, or until one shall have received a majority of the votes cast. In balloting for Directors the twenty candidates receiving the highest number of votes shall be elected and all ballot papers used shall bear the stamp of the Society.

13. No person shall be elected to the office of President of the Society for more than two years in succession, and a period of two successive years shall intervene between any terms of office so held.

14. The President may appoint a Nominating Committee whose duty it will be to prepare a list of twenty members who, from their interest in the Society, will undertake to act on the Board of Directors, and shall nominate the same at the General Meeting. These names shall be printed on a ballot slip, but such action of a Nominating Committee shall not prevent further alternative names being added by members by nomination at the General Meeting.

15. By-Laws may be made, altered or repealed at a meeting called in accordance with the Constitution.

The Gracious Life . . .

Canadian Homes and Gardens holds up the mirror to gracious living—reflects beauty as we find it across the Dominion—in gardens tended with loving care, in homes beautifully planned and maintained. The practical side is not forgotten—in every issue of this magazine the section, Canadian Gardening Illustrated, designed to bring timely information and news to the gardener, is included. In this popular service the many questions that arise inevitably month by month are answered even before they are asked. Thousands of home-owners and gardeners throughout Canada have testified that one of their best investments, and one that continues to pay regular dividends, is represented in their annual subscription to

Japanese Beetle
Leaf Roller
Tarnish Plant Bug
Leaf Beetles
Web Worm
Tent Caterpillar
Flea Beetle
White Fly
Lace Bug
Rose Midge
Red Spider
Cyclamen Mite
Mealy Bug
Countless others

As a fungicide
it controls:

Rose Blackspot
Rose Mildew
Lilac Mildew
Phlox Mildew
Sweet Pea Mildew
Dahlia Mildew
Zinnia Mildew
Delphinium Mildew
Hollyhock Rust
Snapdragon Rust
Carnation Rust
Chrysanthemum Rust
Leaf Spot of Box,
Clematis, etc.
And all other diseases
which are controlled
with sulphur.

TRI-OGEN

Reg. U. S. Pat. Off.

The all-purpose spray

A Positive Plant Protection

An Insect Spray and fungicide for garden and greenhouse plants. Especially recommended as a **rose-garden spray treatment for mildew and blackspot**. Tri-ogen will also control almost every insect pest and disease that attacks the rose. It stimulates plant growth; it is harmless to foliage or blooms; and the fact that it does **three separate jobs in one spraying** is perhaps the reason for its great and ever-increasing popularity. Tested and used by rose and plant growers the world over.

COMBINED AS A KIT

In Four Sizes:

A. Small Kit (makes 16 quarts) \$1.50
Protects 12 to 20 roses for season

B. Medium Kit (makes 64 quarts)—\$4.00
Protects 50 to 80 roses for season.

C. Large Kit (makes 32 gallons) \$6.00
Protects 100 to 160 roses for season.

D. Estate Kit (makes 128 gallons)—\$20.00
Protects 400 to 600 roses for season.
